General Comments

Hello! Thanks for sharing your reflection with us for feedback. You've put a lot of time and effort into your draft, which is great to see. There are a few things to work on now so that you can improve your writing. Some elements of structure can be more refined to strengthen your writing, especially the structure of your body paragraphs. Please feel free to submit the final draft after revision. We'd love to help. Good luck!

Structure

Overall, your writing is coherent, but I noticed a very short paragraph in your work. You must avoid using very short(1-2 sentenced) paragraphs and pay attention to a clear paragraph structure by effectively using clear topic sentences and sticking to one main point per paragraph.

Effective paragraph cohesion

Your paragraphs use cohesive devices effectively, which makes the ideas they discuss easy for the reader to follow and helps your points develop logically. This can be particularly effective when your wording provides cohesion between paragraphs and your initial thesis statement. Cohesive devices include words or phrases such as 'however', 'this relates to...', or 'additionally'.

Effective use of signposting

Signposting language helps us to effectively link our ideas together; you have made effective use of it in your work. Words and phrases such as 'consequently', 'conversely', and 'similarly' allow us to create cohesion by showing how ideas relate to each other and strengthen the overall structure of your writing.

Conclusion effectively linked to the introduction and thesis statement

A strong conclusion needs to have clear links back to the overall topic or argument of the essay, and I can see clear evidence that your conclusion does this.

Avoiding single-sentence or very short paragraphs

Generally, in order to form a complete paragraph, you need to use several sentences. A full paragraph must include a topic sentence, elaborating details, examples and analysis, and a concluding or transition sentence at the end; one or two sentences are rarely able to make a complete paragraph. When you find yourself with a very short paragraph, try either integrating it into a surrounding paragraph where you are discussing similar topics or adding more information to it to form a complete paragraph of its own.

Language

Your language is generally clear and concise, and you have maintained a formal tone which is appropriate for academic writing.

Spelling and grammar

No spelling and grammatical error was detected in this document.

Use of sources

You appear to have used an appropriate amount of resources throughout this submission and integrated them well to formulate a coherent argument; however, you should aim to check each in-text citation and reference against your institution's referencing style guide for accuracy before you submit your assignment for marking.

UNSW resources

It is important to acknowledge your sources through referencing to avoid plagiarism. There are several referencing conventions, such as Harvard, APA and Oxford. These guides offer help with citing your work and compiling reference lists. Feel free to ask your lecturer or tutor what style to use if you're not sure.

REFLECTIVE WRITING DRAFT ENGAGEMENT IN THE PEER REVIEW PROCESS

(Blair) Chuanhui Zheng

August 4, 2024

Engagement in the Peer Review Process

Based on the dialogue and group activities on peer review, I have understood the meaning of the scientific method and the importance of peer review in determining the reliability of conclusions. In this reflection, I will discuss how the activities demonstrated the steps of peer review and the effectiveness of this process. **[The scope of the report is clear in the introduction.]**

Understanding the Peer Review Process

Peer review is one of the critical components of scientific research that guarantees the reliability of the published data. As outlined in our Week 2 lessons, it is usually a process whereby material intended for publication is scrutinised by scholars proficient in that study area before publication. This process can be divided into three main phases: submission, review, and revision. The review phase involves scrutinising the manuscript by independent evaluators who examine the work's merits, relevance, and novelty. Many ultimately support using electronic media as an advertising tool, while others partially agree with it, and some oppose it (Skopec et al., 2020).

The **[Avoid the use of paragraphs that are only one or two sentences long. Please refer to the feedback under Structure.]** last stage of the process is revision, in which the authors meet the comments provided by the reviewers and make the appropriate amendments to the manuscript. The circuitous process here is that feedback from a well-developed methodology enhances the research and its credibility (Indriasari, Luxton-Reilly and Denny, 2020).

Engagement in Group Activities

Our group activities included writing articles and peer reviewing, which helped create an environment similar to actual scientific work. As the authors of a manuscript, we felt the effort needed to prepare a scientific manuscript to adhere to the strict standards for publication (Indriasari, Luxton-Reilly and Denny, 2020). This task necessitated the consideration of details and logical argumentation in presenting our ideas and ensuring the credibility of the evidence. In transitioning to the reviewer role, we assessed the work of others and highlighted strengths and weaknesses. Feedback was given about identifying weaknesses and stating how that could be done to improve the research.

Impact of the Peer Review Process on Our Work

Participating in the various group tasks made it possible to ascertain the necessity of the peer review process in creating sound scientific research. The final article was far better with responses from different people.

Evaluation of the Peer Review Process

When **[There is strong cohesion in your paragraphs; your ideas are presented logically and are easy to follow.]** considering whether the peer review process is the most suitable for reporting scientific research findings, I think it is very efficient but not devoid of certain shortcomings. The process leads to a culture of student and staff excellence and responsibility, ensuring the constant development of science. In our group work, when giving feedback, there are cases when the opinions reflect individual feelings and emotions. This raised the issues of sharing a clear code of conduct and training the reviewers to avoid biases when giving the assessments

(Tennant and Ross-Hellauer, 2020). Further, peer review can be tedious sometimes, dragging down the time taken before creating a platform to get the findings out to the public (Skopec et al., 2020).

Reinforcement of Concepts

While engaging in several group exercises with my team, I grasped the ideas regarding the peer review process. One such significant incident was when, in an article, we received specific contradictory directions, and we modified the respective article. Such evolution of ideas in the framework of this experience underlined the importance of integrating multiple facets of knowledge to arrive at a balanced and adequate conclusion that would embrace all significant aspects of the topic. Furthermore **[Your effective use of signposting language helps to create cohesion in your writing and strengthens the overall structure of your work.]**, the group activities implied that the peer review process is a collective event. This way, one could understand that by coming to peers as both authors and reviewers, one could see how knowledge sharing and critiques push science forward (Tennant and Ross-Hellauer, 2020). **[It looks like you've formatted your in-text citations consistently throughout your work, but remember to consult your referencing guidelines to check this format follows your prescribed style.]**

Peer **[Your conclusion has clear links back to your introduction.]** review is an essential element of scientific work since it allows for identifying reliable and valid material within publications. Relating and participating in group activities were beneficial in evaluating this process, including its advantages and weaknesses **[You have demonstrated a strong and appropriately formal academic tone throughout your writing.]**.

Reference [It looks like you've formatted your references consistently throughout your reference list, but make sure to double-check your prescribed referencing guide to ensure that each reference follows the correct format and style.]List
